

Special Issue

of the **Infocommunication Journal**

Security-related tendencies and solutions

This issue aims to present the results of research on information security. Accordingly, it pays particular attention to today's security challenges, possible solutions, and ways to improve the security solutions already being applied in. It aims to contribute fresh insights and innovative approaches to the debate on security. It explores the complexity of modern security challenges, analysing their root causes and possible consequences. In addition, it explores new strategies and technologies that can improve existing security solutions, helping to build a more robust and effective security framework for the future. This special issue also highlights the importance of cooperation between stakeholders, such as governments, private sector organisations and individuals, to strengthen security measures and mitigate risks. By examining the leading causes of modern security challenges, this volume aims to provide a comprehensive picture of the complex nature of these threats. It emphasises the need for proactive measures and proactive approaches to address these challenges to ensure a safer and more secure environment.

This special issue collects the latest results emerging on the field of research on Information Security.
